Normal vs Doppler Echo Byte Layout

Status values: `0x01` (1) = Normal, long pulse `0x04` (4) = Normal, short pulse
`0x101` (257) = Doppler, long pulse `0x104` (260) = Doppler, short pulse

Extraction: D flag = `byte & 0x80` (0 = stationary, 1 = moving target)
Intensity = `byte & 0x7F` (masked to 7 bits)
Example: `0xC7` → D = 1 (moving), intensity = `0x47` = 71
